Welcome to the Touchscreen company education technology range. Designed with simplicity in mind, our education products provide classrooms with a range of interactive collaboration opportunities and are ideal for all stages of the curriculum.

Utilising the latest PCAP touch technology, we've created a range of products that are easy to use, and include a range of unique features designed around safety and cleanliness.

PCAP technology offers the most responsive and sensitive touch experience. The screen supports multi-touch which enables multiple users to manipulate images, annotate and zoom in and out in a pinch.

All displays come with toughened glass which is perfect for the education environment, and all four wheels lock in place to add strength when in use. A safety cover kick board above the feet comes as standard on every unit.

Whether you are a teacher looking for flexible collaboration solutions or a savvy education reseller looking for a margin maker, the Touchscreen company range offers a host of opportunities.

The curve is a portable, adjustable and utilised the same way as a smart phone or iPad.

Every Curve comes with a commercial grade screen and a battery power pack so there are no potential trip hazards.

Having the option of USB, HDMI, VGA, USBC and Bluetooth means various devices can be connected to the table, increasing options of use. This can be useful for staff training, presentations and transferring data.

REDUCED DISTORTION

The curvature helps minimize distortion and reflections, especially at the edges of the screen, leading to a more uniform image quality across the entire display.

INCREASED VIEWING ANGLES

Curved screens can provide better viewing angles, allowing multiple viewers to see the content clearly without losing image quality.

AESTHETIC APPEAL

Curved screens often have a sleek, modern design, which can enhance the aesthetic appeal of a workspace or home entertainment setup.
